STUTI SRIVASTAVA

+91-9980047478 stutisrivastava922@gmail.com linkedin.com/in/stutisrivastava

Summary

AI/ML Engineer with 5 years of experience building and productionizing machine learning, NLP and Generative AI systems. Hands-on experience in transformer-based model fine-tuning, RAG, search, embeddings, vector databases, multi-agent systems and scalable ML inference. Experienced in taking AI solutions from problem definition and experimentation through low-latency production deployment, with a focus on accuracy, scalability, cost and business impact.

EDUCATION

Nitte Meenakshi Institute of Technology | Bengaluru, India **CGPA: 9.34/10**
Bachelor of Engineering in Computer Science Engineering ***2017 – 2021***

SKILLS

Programming Languages and Frameworks: Python, PySpark, SQL, FastAPI, Flask

AI: Machine Learning, Deep Learning, NLP, Transformers, Text Classification, Embeddings, Fine-tuning, LoRA/QLoRA, PyTorch, TensorFlow, LLMs/SLMs, RAG, Multi-Agent Systems, LangGraph, AWS Strands, A2A, MCP, Prompt Engineering, LLM Evaluation, Guardrails, Multimodal AI

Search & Retrieval: Azure AI Search, Vector Search, Semantic Search, FAISS, Pinecone, Chroma, Embeddings, Knowledge Graphs

ML Engineering: Docker, Kubernetes, REST APIs, Microservices, CI/CD, Model Serving, AWS, Azure, Jenkins, CloudBees

Tools and Libraries: Git, JIRA, Grafana, Jenkins

Cloud and Infra: AWS (Bedrock AgentCore, Secrets Manager, CloudWatch), Azure (ADF, Databricks, Kubernetes, Blob Storage, Functions, Container Apps, Key Vault), Docker, Kubernetes, Jenkins

Monitoring & Observability: Lumenova, SignalFx, Splunk, AWS Cloudwatch, RAGAs

EXPERIENCE

EY GDS **Aug 2024 – Present**
Consultant | Senior Generative AI Engineer *Oct 2025 - Present*

- **Enterprise Architecture Governance Platform**
  - Designed and developed a **production-grade Enterprise Architecture Governance platform using AWS Strands in Python** (1 supervisor + 6 specialized agents), deployed on **Bedrock AgentCore** using the **A2A protocol** for autonomous cross-agent coordination.
  - Cut architecture review turnaround **from 3-5 days to under 10 minutes (95%+ faster) while holding 85%+ precision** on flagged compliance issues, validated against manual review.
  - Built full-pipeline observability **(Lumenova, SignalFx, Splunk, CloudWatch)** and integrated AI Guardrails, reducing hallucinated/unsafe outputs and cutting agent-failure detection time

- **Architecture Diagram Generator**
  - Designed a multi-agent LLM system **using Python and LangGraph, with Azure OpenAI for LLM, Graphviz)** that converts natural-language architecture descriptions into rendered diagrams.
  - Eliminated manual documentation steps from the solution design workflow, accelerating design turnaround.

Senior Analyst | Generative AI Engineer *Aug 2024 – Sep 2025*

- **Multi Agent DataStage to Pyspark Converter**
  - Designed and developed a **multi agent AI system using LangGraph and Azure OpenAI LLM** that autonomously analyzes and converts IBM DataStage (DSX) ETL pipelines into optimized Pyspark Code using **Python FastAPI** based orchestration.
  - Engineered a **redundancy-detection agent** that scored and flagged duplicate pipelines, and a **code-generation agent** that generates optimized pyspark code and also merges redundant jobs into unified pyspark workflows.

- **Reduced manual refactoring effort by 70%** and improved migration accuracy and scalability.
- Deployed the application on Azure using **Docker and Kubernetes**.

- **Informatica To PySpark Converter**
  - Designed a **multi agent AI system in Langgraph (Python)** to convert Informatica ETL Workflows into optimized Pyspark code with an interactive Streamlit application for migration visualization and user interaction.
  - Implemented **specialized agents** for parsing, transformation mapping, business logic extraction, code generation, and optimization.
  - Improved ETL migration efficiency and **reduced manual conversion effort** from 5 days (manual) to 2 hours.

Unisys, India | Associate Software Engineer **Aug 2021- Aug 2024**

Data Scientist

- **Fine-tuned Llama 2 using LoRA** on enterprise underwriting datasets to generate domain-specific recommendations. Designed scalable **FastAPI (Python)** inference services and deployed them on **Azure Kubernetes Service**.
- **Fine-tuned Mistral using LoRA** on enterprise application logs to build a contextual log-analysis assistant capable of interpreting previously unseen application errors.
- Built a conversational assistant using **Azure AI Search and RAG**, implementing **document retrieval and semantic search** over university textbooks to provide context-grounded responses using **Azure OpenAI**. Deployed as a Flask app (Python) on Azure Kubernetes.
- Built end-to-end machine learning pipeline generating automated ServiceNow incident resolutions with **incidents classification using Random Forest**. Integrated **Azure Event Hubs** for enterprise event-driven workflows.
- Implemented a time series machine learning solution using **FBProphet to forecast VM utilization**, enabling efficient resource management and providing **cost-effective recommendations** for scaling VM resources.
- Led **migration from monolithic to microservices using FastAPI and Flask**, containerizing with docker and deploying on Azure Kubernetes, **significantly enhancing system maintainability.**

AWARDS AND ACHIEVEMENTS

- Honoured with **Achiever Extraordinaire Award** consecutively for 2 years for my contribution in Generative AI at EY GDS.
- Received **GDS User Recognition Award** for building an architecture assist application that reduced review time by 40%.
- Received commendations and recognition at **Unisys** for leading the successful migration from monolithic to microservices architecture.

COURSES AND CERTIFICATES

- AI-900: Microsoft Azure AI Fundamentals
- Generative AI Fundamentals Badge by Databricks
- Generative AI with LLM, Applied ML using Python – Coursera
- GH-300: Github Copilot
- Problem Solving by Hackerrank
